

Hyperbaric Oxygen Therapy Sudbury

Hyperbaric Oxygen Therapy Sudbury - Therapy called oxidative therapy is performed by introducing extra energy in the body. The three ways which this may be accomplished is to introduce oxygen inside the body under pressure making use of Hyperbaric Oxygen, through combining blood with ozone gas, or through infusing H₂O₂ or Hydrogen Peroxide into a vein. It only takes a small amount of Hydrogen Peroxide to produce a large amount of oxygen, therefore, parts on the body that suffer from poor circulation can benefit very much from the oxygen supply.

Oxidative Therapy has been around for many years. In the year 1920, Dr. T.H. Oliver first used Intravenous Hydrogen Peroxide during an epidemic of influenza pneumonia. This successful treatment helped a lot of individuals and results were reported in the Lancet, a British medical journal. Several years after, a paper was published by Dr. Charles Farr entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This particular paper has become the protocol for physicians who administer H₂O₂.

The theories around this therapy differ in its explanation of the way this treatment works. Some scientists and researchers have discovered that the presence of H₂O₂ in the body is much more complicated than initially believed. The benefits of Oxidative Therapy have been show effective for the following health illnesses: Cerebrovascular Disease, Cardiovascular Disease, Coronary spasm, Cardiac arrhythmia, Asthma, Peripheral Vascular Disease, COPD, Pulmonary Diseases, Raynaud's Phenomenon, Influenza, Chronic Bronchitis, Bronchiectasis, HIV, Herpes Simplex, Lupus, Immune Disease, Multiple Sclerosis, Alzheimer's, Fibromyalgia, Chronic Fatigue, Rheumatoid Arthritis, Environmental Poisonings, Migraines, and Parkinson's Disease, to name some.

The energy producing chemical reaction of oxidation is essential within the body because the body makes use of different forms of oxygen. In order to prevent damage to surrounding normal tissue, treatments should be carefully controlled. Anti-oxidants which come in the type of vitamins and enzymes will help to protect the body from whatever damage due to oxidation. However, the immune system uses oxidative energy as a weapon so as to directly kill infectious agents like bacteria, yeast, parasites and viruses.
