

## Acupuncturist in Sudbury

Acupuncturist in Sudbury - IV therapy or also known as Intravenous therapy is the placing of substances straight into a vein. IV therapy has been used to correct electrolyte imbalances and in order to deliver medications in blood transfusions. It can likewise be utilized as fluid replacement to correct, for instance, dehydration. The intravenous route is the fastest way to deliver medications and fluids throughout the body. Several medications, as well as lethal injections and blood transfusions, could only be given intravenously.

Vitamin C Intravenous therapy is an alternative treatment used for illnesses like cancer. Lots of centers dedicate particular treatment regimens, although there is still some controversy surrounding this particular type of treatment. Among the reputed effects of Vitamin C therapy include: prolonging survival and increasing the quality of life. Vitamin C is effective in preventing systemic free radical injury and corrects an ascorbate deficiency, that is usually found in cancer patients. Vitamin C inhibits hyaluronidase. This is an enzyme made by cancer cells that is responsible for the breakdown of healthy tissue, resulting in metastasis and tumor progression. Vitamin C also works synergistically conventional with different conventional cancer treatments.

Vitamin C, likewise referred to as L-ascorbate or L-ascorbic acid is an extremely essential nutrient for human beings and a lot of other animals. It acts as an antioxidant and protects the body against oxidative stress. Vitamin C is likewise a co-factor in at least 8 enzymatic reactions consisting of different collagen synthesis reactions which cause the most severe signs of scurvy when they are not working properly. In animals, these enzyme reactions are extremely essential in preventing bleeding from capillaries and wound-healing.

### Vitamin C Mega Dosage

There are many who fully advocate and endorse using Vitamin C, in excess of 10 to 100 times more than the RDI or Recommended Daily Intake. Vitamin C supplements could be taken by intravenous therapy or orally. There have yet to be randomized, large clinical trials on the effects of high doses performed on the general people. Linus Pauling spent a large portion of his life supporting the use of mega doses of vitamin C. He thought the established RDA was sufficient in order to prevent scurvy but not necessarily a high enough dosage for optimal health.

A mega dose of Vitamin C has been and continues to be used to prevent and treat many various illnesses, among which include the common cold, cancer and coronary disease. Current recommendations for Vitamin C are anywhere from 30 - 100 mg on a daily basis. Individuals taking a mega dose can ingest anywhere from 500mg to 1000 mg on a daily basis but the side effect of diarrhoea can be a common problem for people who ingest large amounts.
